

**Print Portfolio Presentation
Demo Reel Integration**

Using the techniques we've covered in class, integrate video into your website. Keep the size for each video file consistent and reasonable (no larger than 500px in width), such that the video and audio loads quick. Upload at least 4 videos of your work to your website. Add a custom video player for each video that gives the user control over playing / pausing the video and controlling audio levels.

Upload your video and all your HTML files to the web.

Video Integration 20 points (x 4)	Video loads fast, is optimized, and integrates cleanly with the rest of the site. Playback buttons are included to control audio and video.	Video loads fast, is optimized. Minor issues with how the video integrates with the rest of the site. Playback buttons are included to control audio and video. Uploaded and accessible from website.	Video loads slow or is at too large of a resolution and / or playback buttons are not included.	Issues in playback of video.
Technical Specifications 20 points	4 videos integrated into website. Uploaded and accessible from website on server. Consistent in size.	Less than 4 videos integrated into website. Accessible from website on server. Consistent in size.	Less than 4 videos integrated onto website. Not uploaded to server. Size of videos not consistent.	Did not follow technical specifications at all.

Total Possible Points: 100
